Regular Pool Draining: Preventing TDS and Cyanuric Acid Buildup

Draining a pool every 7 years is important to prevent the buildup of high Total Dissolved Solids (TDS) and Cyanuric Acid levels, which can negatively impact the water quality and the effectiveness of pool chemicals. By regularly draining the pool every 7 years, pool owners can prevent the accumulation of high TDS and Cyanuric Acid levels, ensuring clean, clear, and properly balanced water for a safe and enjoyable swimming experience.

DID YOU KNOW???

We offer more than just pool service.

We also provide a variety of other services including:

- New equipment Installations

- Chlorine and Acid washes

AQUA SYSTEM POOLS

SPRING NEWSLETTER 2024 EDITION

Flowers Pollen and Warmer Weather

Springtime in Southern California can bring a lot of pollen, dust, and debris into your pool and it may take a little extra TLC to get rid of all the pollen in pools and on tile lines. Pools may need extra filter cleans or longer run times in order to remove all the pollen and debris from this years spring season. Here are a few tips to keep your pool running smoothly:

- You may need to increase pump runtimes as weather warms up and pollen builds up.
- Increase suction to skimmer to help mitigate pollen

SPRING VACATION

We will be shutting down for vacation the week of April 7th-April 14th, there will not be anyone out to service your pool during this time. Please let us know if you have any questions or concerns, we will be servicing your pool the week before as well as the week after. This will be the first of 3 weeks we will take off during the year. The other two will be Thanksgiving and Christmas. In case there's an emergency please call and leave a voicemail and I will have one of our technicians contact you to resolve the issue accordingly.
