

2025 FALL NEWSLETTER

FALL POOL CARE TIPS:

With more winds and falling leaves during this season, your pool may need a little extra attention!

Here are our best tips to keep your pool in top shape this fall:

Run Your Pump:

Running your pump for at least 8 hours each day ensures debris is pulled into the skimmer.

Check and Empty Baskets:

This helps maintain proper flow and filtration.

Trim Nearby Trees:

This minimizes falling leaves and branches that can fall into your pool.

Keep the Deck Clear:

Clear of debris that could get blown into the pool.

Check Water Levels:

Wind can cause evaporation; ensure your water level is adequate for skimmer and proper circulation.

DOES YOUR POOL HAVE A LEAK?

If you suspect a leak, start with a simple **bucket test** to confirm. Then, give us a call to schedule a professional leak detection test. We'll quickly locate the problem and help you protect your pool before it gets worse!

Wondering if your pool has a leak? Here are a few telltale signs: if your **water level drops quickly**, your **water bill spikes**, there are **wet spots around the pool deck or yard**, **cracks in the pool surface**, **unusual pump or filter sounds**, or the **water level is below the skimmer**.
