## Flower Pollen & Warm Weather

During the spring season in Southern California, the influx of pollen, dust, and debris can significantly impact the cleanliness of pools and tile lines. Consequently, additional maintenance may be required to effectively remove these contaminants. Pools may necessitate enhanced filter cleaning or extended filter run times to ensure thorough removal of pollen and debris accumulated during the spring season.

To optimize pool performance, consider the following strategies:

1. Adjust Pump Runtimes: As the weather warms and pollen levels rise, it may be necessary to extend pump runtimes to effectively circulate the water and remove pollutants.
2. Enhance Skimmer Suction: Increasing the suction power of the skimmer can help capture pollen and other debris from the surface or the water.

## Spring Break Vacation

We will be shutting down for vacation the week of March 30th-April 6th. There will not be anyone out to service your pool during this time. Please let us know if you have any questions or concerns. We will be servicing your pool the week before as well as the week after. This will be the first of 3 weeks we will take off during the year. The other two will be Thanksgiving and Christmas. In case there's an emergency, please call and leave a voicemail, and I will have one of our technicians contact you to resolve the issue accordingly.
